

installation guide

DC30, DC40 & entry panels with built in code lock

quick start guide

In most installations all that is required is a single code for the user to open a door. Into the keypad enter the following

✖, 1, 2, 3, 4

The unit is now in program mode. (the sounder & LED will pulse and the lock relay will change state)

0, 1, ?, ?, ?, ?, ✖

Where ?, ?, ?, ? is 4 digit number (using numerical characters 0 - 9 only).

The user code may now be tested for correct operation. We strongly recommend *changing the programmers code* (ie do not leave it set to 1234). See setting the programmers code.

code lock features include:

- 30 x 4 digit codes (+ 10 latching)
- Programmable lock time (01-99 secs.)
- Timed exit request
- Codes disable input
- Non-volatile data storage (>10 years)
- 25 secs. Lockout on 3 wrong codes
- illuminated keypad (DC30 only)

programming concepts

All programming changes are made by first entering the Programmers Code (This code is only used for accessing programming mode).

SRS code locks are capable of storing up to 30 individual codes for timed operation plus 10 codes for latching the relay.

Codes are stored in a location system (pigeon holes) from location 01 to location 40. The codes are always related to their location and therefore a code can be deleted by code or by deleting the appropriate location (pigeon hole).

Codes 31-40 are reserved for latch operation (toggle). Once in latch mode, any valid latch code will restore normal condition (relay off).

It is good practice to fill in a code User Log to ensure that codes and their distribution is recorded (see back page).

INDC40 20041218

programming

DC30, DC40 & entry panels with built in code lock

setting the programmers code

Factory set code is 1234

- 1.1) With the power off press and hold down the * key
- 1.2) Connect power and continuous tone sounds.
- 1.3) When the tone stops release the * key and enter your new 4 digit Programmers Code.
- 1.4) A two second confirmation tone sounds after the 4th digit is entered.

____ _
new Programmers Code

entering programming mode

- 2.1) Press * and then enter the 4 digit Programmer Code.
- 2.2) When the correct Programmer Code is entered then the sounder & LED will pulse and the lock relay will change state.
- 2.3) To exit Programming Mode press the * key.

setting the lock time

Factory set time is 05 seconds

- 3.1) Enter Programming Mode.
- 3.2) Enter 00 (this selects special location 00).
- 3.3) Enter the desired lock/relay operation time in a two digit format (01 to 99 seconds).
- 3.4) The code lock will return to the Programming Mode Base Level.
- 3.5) Press * to exit Programming Mode.

adding user codes

Factory set code in location 01 is 6789

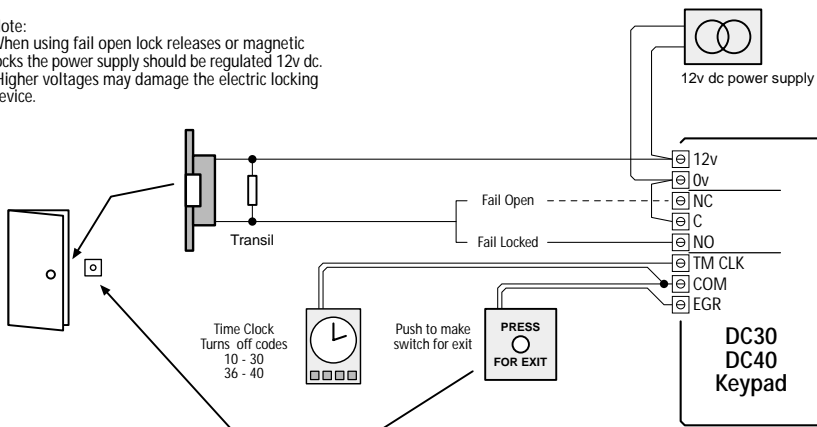

- 4.1) Enter Programming Mode.
- 4.2) Enter the location 01 to 41 (31-40 are the latching code locations). If a series of beeps are heard at this point then the location has a code stored, you may proceed as this is only a warning tone.
- 4.3) Enter the desired 4 Digit User Code, If the code lock returns immediately to the Programming Mode Base Level then the code is not permitted as it already exists elsewhere in another location. If the code is permitted then a 2 second confirmation tone will be heard.
- 4.4) Return to Step 2 to enter more User Codes or press * to exit Programming Mode.

deleting user codes

- 5.1) Enter Programming Mode.
- 5.2) Enter the desired location (01 to 40), If a series of beeps are heard at this point then the location already has a code stored, you may however proceed as this is only a warning tone.
- 5.3) Press the # key to delete the code from the location, a 2 second confirmation tone will be heard.
- 5.4) Return to step 2 to delete more codes or press * to exit Programming Mode.

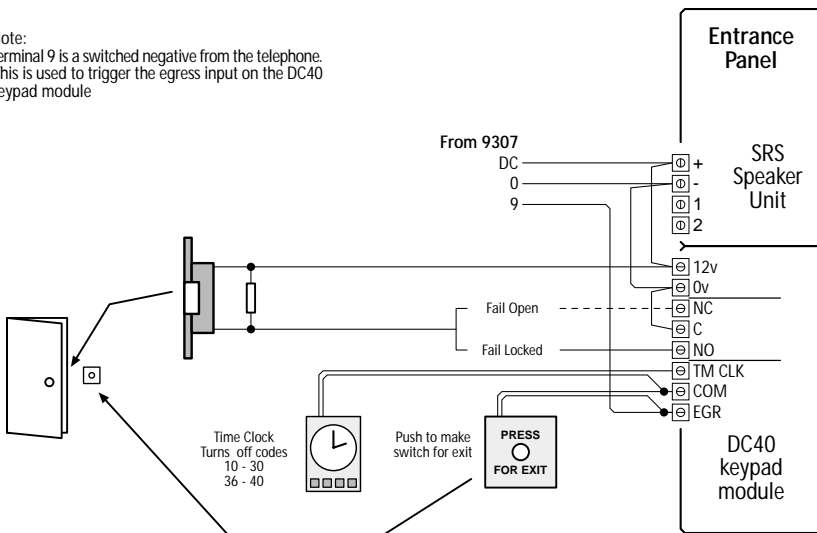

Connecting the keypad for stand alone operation

Note:
When using fail open lock releases or magnetic locks the power supply should be regulated 12v dc.
Higher voltages may damage the electric locking device.

Connecting the keypad to SRS door entry system

Note:
Terminal 9 is a switched negative from the telephone.
This is used to trigger the egress input on the DC40 keypad module

advanced

DC30, DC40 & entry panels with built in code lock

deleting a user code from an unknown location

- 6.1) Enter Programming Mode.
- 6.2) Press the # key, the red LED remains on.
- 6.3) Enter the 4 Digit User Code to search and delete, a 2 second confirmation tone will be heard.
- 6.4) Return to Step 2 to search and delete more lost codes or * to exit Programming Mode.

delete all settings

This function should only be used in extreme circumstances as all User Codes and the Programmers Code will be deleted.

- 7.1) Enter Programming Mode.
- 7.2) Press the # key once, the LED will remain on
- 7.3) Press the # key a further eight times to delete all information, the LED will turn off and a tone will be heard for to indicate that the Delete All process is taking place. The Programmers Code will not be effected.

Note: You must enter all 9 #'s to complete the delete all command.

Note2: This does NOT restore factory settings which are manually entered during testing of the code lock.

time clock (TM CLK)

When the Time Clock input is closed all user and latching codes programmed in locations 10 -20 & 36-40 inclusive will not operate. Use SRS 5200 time clock to switch user codes on and off. Codes programmed into locations 01-09 & 31-35 are not affected.

egress (EGR)

The egress input (request for exit) should be connected to a N/O push to make switch (eg. SRS 88000 series). If this input is closed with a Time Clock or latching switch the lock/relay will operate until the input is opened again (+ the Lock Opening Time).

LED and sounder definitions

Confirmation Tone

2 second tone LED Off

Illegal Code / Location Occupied

4 short Beeps LED Off

Programming Mode / Base Level

Pulsing Beep LED pulse

Code Entered but Time Clock closed

3 second tone LED Off

warning

When using a DC40 with electric gates or barrier systems, an interface relay 9331 MUST be used. Failure to do this may cause irreparable damage to the DC40 when used with certain gate and barrier controls.

Always connect the supplied suppression component (Tranzil) across the locking device terminals. Failure to do this may cause erratic operation or even equipment damage.

example user log

Location Number Control	4 Digit Code	User or Group Description	Time
01	1234	Managers Code	N/A
10	6538	General Day Use Code	Yes
30	7612	Post man's Code	Yes
31	9456	First latch code	N/A
36	5632	Latch code 2	Yes
